CORRIGENDA

Volume 66, July 1991

Page 253, Fig. 6, should appear as follows

![Diagram](image)

**FIG. 6.** Cluster analysis of the *Arius felis* facial taste responses. Dendrogram illustrates the relationship of taste fibers forming the 4 accepted groups. Neuron numbers to the left of the dendrogram correspond to the cell numbers in Table 1. Bars to the right of the neuron numbers correspond to the coding in Figs. 7 and 8. Solid lines indicate cells within the clusters; broken lines show the amalgamation of the clusters and the outlying fiber into a single group. The scree diagram shown in the insert suggests there are 4 major clusters of neurons.
